

BidLand

Final Year Project

Session 2020-2024

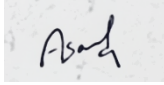

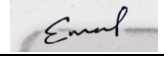

A project submitted in partial fulfilment of the
COMSATS University Degree
of
BS in Computer Science / Software Engineering (CUI)

Department of Computer Science
COMSATS University Islamabad, Lahore Campus

26 December 2023

Abstract

Bid land is a concept that was created for Pakistani users with the goal of allowing them to sell or purchase their preferred property, whether new or old, from the comfort of their own home. Selecting a project like Bid Land is a challenging option since people in Pakistan do not want online purchasing owing to trust difficulties, and they are not as accustomed to utilizing technology, so any sort of new technological shift takes time to acclimatize to. To meet this difficulty, the Bid Land idea will be created with the client in mind, and user-friendliness will be our primary goal. We want to target a wide range of property types, including stores, residences, commercial properties, and any other property that may be auctioned off by you and the sellers to end users, whether the items are new or used. The payment mechanism will be particularly efficient in terms of safe transactions and refunding possibilities in the event of a bid loss. The primary purpose is to satisfy users and customers.

Chapter 1: Introduction

1 Introduction

The auction/bidding system is essentially a contract between seller and buyer that contains a series of terms created for the sellers of the goods to move the preferred property to the end user. This traditional system of bidding is popular in Pakistan in manual form, but there are no websites/applications that successfully automate the bidding system, so there is a need to automate this bidding system as we live in a dynamic world where everything needs to be automated so that end users can use it easily. Other individuals worked on its automation as well, but none of the websites allow end users to sell/buy old things by bidding. The term "online bidding/auction system" refers to a website/application where users can participate and bid on goods/items that can be uploaded for auction purposes, and where the system allows users to set the products according to their desires for bidding purposes and registration, and then customers can easily bid on the desired product.

Indeed, this is what the notion of Bid land is designed for. Bid land is an online bidding system built for Pakistani users that allows them to construct their offers utilizing online bidding websites as either a vendor or a buyer. This approach is for anybody who wants to sell their new or old property for a decent profit or who wants to purchase their preferred property land for the lowest price while sitting at home.

Bid Land provides new and used property for auction purposes, with sellers displaying their land for sale on the internet and purchasers bidding for the land they wish to purchase. The bidding would be secret, and the highest bidder would be contracted for that bid, with the seller ensuring that the property documents procedure was completed on time. Bid land offers a variety of product categories for sale or buy, including commercial, residential, plots, buildings for rent, homes for rent, and so on.

The system would ensure a safe and secure payment mechanism, as well as the most secure online payment possibilities. In the event of a difficulty or query, Bid Land will give users with 24/7 help or support services. The sealed bid technique will be used for bidding in the system.

1.1 Objective

Objectives for Bidding System for Property Purposes:

1. Benefit to Sellers:
 - Enable sellers to sell their property at the highest possible price from the comfort of their own homes.
 - Offer the lowest possible selling fees to the website.
 - Attract a large number of potential buyers.
 - Provide a secure and reliable environment with seller support.
2. Benefit to Buyers:
 - Allow buyers to purchase properties at the best possible price.
 - Provide a secure and reliable environment with comprehensive customer support.
 - Ensure protection from fraudulent activity.
3. Benefit to Stakeholders:
 - Provide a good return on their investment.
 - Attract a large audience of users.
4. Target a Large Number of Customers:
 - Introduce simple and interactive interfaces to attract a larger customer base.

- Use a sealed bidding system to ensure fairness.
- Reduce the chances of shill bidding to improve the security of the bidding process.
- Provide customer and seller support services to ensure satisfaction.
- Focus on used properties to benefit both buyers and sellers.
- Allow customers to receive email notifications when desired properties become available.
- Offer property video options to decrease the risk of scams.
- Launch a website in Pakistan to attract a large number of customers.

1.2 Problem statements

The online bidding system for real estate transactions in Pakistan is hampered by various challenges such as limited internet coverage in rural areas, limiting access and participation. Language barriers hinder the communication and understanding of users who speak different languages. Trust concerns arise because of possible fraud and misrepresentation. Different property laws and regulations in different regions complicate the buying and selling process. Verification and authentication are facing problems due to insufficient records and fake documents. Infrastructural limitations such as slow internet and power outages hamper operations. Cultural and social norms influence decision making. Overcoming these challenges is critical to ensure a successful and inclusive online bidding system in Pakistan.

1.3 Assumption and Constraints

1.3.1 Assumptions

- The website will have a user registration and authentication system in place, allowing users to create accounts, log in, and manage their personal information securely.
- The website will have a bidding system that allows registered users to place bids on properties of interest. Bids may be time-limited, and the system will handle bid validation and notification processes.
- The website will offer search and filtering options to help users find properties based on specific criteria such as location, property type, price range, and other relevant parameters.
- The website will be designed with a responsive layout, enabling users to access and use the platform seamlessly across various devices, including desktops, laptops, tablets, and mobile phones.
- The website will adhere to privacy regulations and implement measures to protect user data. This includes securely storing user information, encrypting sensitive data, and implementing appropriate security protocols.

1.3.2 Constraints

Following are the constraints of our project:

- The website development is subject to time constraints, requiring the project to be completed within a year.
- Only authentic buyers and sellers are permitted access to the system.
- The user of this system must be familiar with the fundamentals of information technology.
- The website must be accessible at all times.

1.4 Project Scope

In the present era, it has become imperative to automate all processes, and Bid land aims to do just that by automating the conventional and manual system of bidding operations within Pakistan. The primary objective of this concept is to enhance the ease and efficiency of buying and selling property from the comfort of one's home, at just a few clicks. The advent of technology has made it possible to reduce the extra cost and time consumption associated with such processes, as almost everything is now available online. Bid land offers a straightforward and user-friendly concept that provides the facility to sell/buy the property just a few clicks from your home. Our target market comprises vendors/sellers, including businessmen who want to auction their new/used property, the local public who want to sell their used property or give it on rent, and customers who want to buy property online by participating in the auction process from the ease of sitting at their home without going anywhere. The online auction procedure will be simple and easy to use, making it accessible to everyone. We plan to market our Bid land property through social media campaigns and digital marketing. Considering that our target market is the Pakistani population, the website's design will be kept simple and easy to use. We will provide reasonable and affordable packages for vendors/sellers and customers using our online website for business purposes. Bid land will be highly user-friendly and offer 24/7 support. Our aim is to revolutionize the conventional property buying and selling process in Pakistan, making it more accessible and convenient for everyone.

Chapter 2: Requirements Analysis

2 Requirement Analysis

2.1 Related work

In this age of digital transformation, it is imperative that the bidding system undergoes digital revolution of its own. Numerous websites and applications have emerged in response to this need, proposing their solutions to enhance the bidding process. While some have proven to be successful, their accessibility remains limited, and not everyone can avail themselves of their services. Below are some of the most successful bidding applications we have come across.

2.1.1 Zameen.com

Zameen.com is Pakistan's top online property portal, providing a wide range of real estate services to help users make informed decisions. With over 6 million property listings and 8 million monthly visits, we have been at the forefront of digital transformation in Pakistan's real estate industry since 2006. Our commitment to innovation and partnerships with property developers, agents, and financial institutions enables us to offer users a one-stop shop for all their property needs. We strive to empower our users with accurate information, expert advice, and cutting-edge tools to simplify the buying, selling, and renting process.

Graana.com

[4] Graana.com is a leading real estate portal in Pakistan, offering a wide range of residential and commercial properties. The platform provides users with expert market analysis, accurate valuations, and user-friendly features like advanced search filters and 3D virtual tours. With a focus on customer satisfaction and innovation, Graana.com is a reliable and trustworthy platform for buying, selling, and renting properties.

2.1.2 OLX

[2] OLX Pakistan is a popular online classifieds platform offering a wide range of properties, including residential and commercial ones. Its user-friendly interface allows users to search for properties according to their preferences, communicate with sellers/buyers, and access related services such as real estate consultancy and property management. With its broad reach and valuable insights from experienced professionals, OLX Pakistan is a reliable platform for buying, selling, and renting real estate properties in Pakistan.

2.1.3 Lamudi.pk

[3] It is a reliable and user-friendly online real estate platform offering a wide range of verified properties for sale and rent in Pakistan, including residential and commercial properties. The platform provides detailed property listings with high-quality images and descriptions, and also offers related services such as legal documentation and property inspection. With a focus on transparency and accountability, Lamudi.pk is a trusted choice for anyone looking to buy or rent properties in Pakistan.

2.1.4 Rightdeed.com

It is a reliable real estate platform offering a wide range of verified properties for sale and rent in Pakistan, including residential and commercial properties. The user-friendly interface allows users to search for properties based on various criteria, with detailed property listings including high-quality images and comprehensive descriptions. Rightdeed.com also provides valuable insights into the real estate market and related services such as legal documentation and property management. The platform is committed to transparency and authenticity, making it a trusted choice for real estate transactions in Pakistan.

2.2 Stockholder list

2.2.1 Admin

2.2.2 Seller

2.2.3 Buyer/Customer

2.3 Requirements Elicitation

2.3.1 Functional Requirements

User

FR1: Login (Seller/ Buyer)

Req. No.	Functional Requirements
FR1-01	Seller/buyer Must enter a valid email and password associated with account.
FR1-02	The login page should display an error message if the Seller/buyer enters an incorrect email or password.
FR1-03	Must be able to access the Seller/buyer dashboard upon successful login.
FR1-04	The login page should have a "Remember me" checkbox option so that the Seller/buyer can remain logged in.

FR2: Register (Seller/Buyer)

Req. No.	Functional Requirements
FR2-01	Seller/buyer should be able to register for a new account by providing their name, email address, phone number, and creating a password.
FR2-02	Seller/buyer Must be able to verify and approve before they can access the dashboard.
FR2-03	Seller/buyer should also be able to register using their social media accounts.

FR2-04	The system should validate the Seller/buyer input fields to ensure that all required information is provided and is in the correct format.
FR2-05	After successful registration, the system should be send a confirmation email to the Seller/buyer registered email.
FR2-06	The seller should receive an error message if they enter an email address which is already registered.
FR2-07	The seller should be prompted to provide the additional information, such as their company name and the address, during the registration process.

FR3: Log out (Buyer / Seller / Admin)

Req. No.	Functional Requirements
FR3-01	The system shall allow the admin/seller/customer to log out from the website/system.
FR3-02	The system allows the admin/seller/customer to click on log out button.
FR3-03	The system saves the current state of each user on logout.

FR4: Forget Password (Seller/Buyer)

Req. No.	Functional Requirements
FR4-01	Seller/Boyer/admin Must have the ability to reset passwords.
FR4-02	Seller/Boyer/admin Must verify the identity of the user requesting the password reset.

FR4-03	Seller/Boyer/admin be able to reset their password by clicking on the 'Forgot Password' link, entering their registered email address, and following the instructions sent to their email.
FR4-04	After resetting their password, the Seller/Boyer/admin should be prompted to log in again.
FR4-05	The reset password link should expire after a certain period of time for the security reasons.

FR5: About Us

Req. No.	Functional Requirements
FR5-01	Seller/Boyer Must be able to view the "About Us" page on the website.
FR5-02	Seller/Boyer should be able to view the details of the company or the website.
FR5-03	Seller/Boyer the 'About Us' page should provide a brief history of the company and its mission statement.
FR5-04	Seller/Boyer the 'About Us' page should also provide information on the stockholder's responsibilities and policies when using the platform.

Seller

FR6: Profile Update

Req. No.	Functional Requirements
FR6-01	Seller Must have the ability to update their own profile information (e.g. name, email, and password).
FR6-02	Must be able to update their seller profile information (e.g. store name, contact information).

FR6-03	The system should display a confirmation message after the seller has successfully updated their profile information.
FR6-04	The seller should be able to upload the profile picture to their account.

FR7: Become Seller

Req. No.	Functional Requirements
FR7-01	The system should include a field where seller can enter their Computerized National Identity Card (CNIC) for verification purposes.
FR7-02	The system should allow seller to upload an image of the front side of their Computerized National Identity Card (CNIC) in a designated image upload field.
FR7-03	The system should allow seller to upload an image of the back side of their Computerized National Identity Card (CNIC) in a designated image upload field.
FR7-04	The system should provide a "Submit" button for seller to submit their verification information.
FR7-05	After successful verification, the system should allow the seller access to the website as a verified seller.

FR8: Property Listing

Req. No.	Functional Requirements
FR8-01	The system should provide a feature for seller to list their property.
FR8-02	The seller should be able to create a new Property listing by providing details such as title, description, category, price, and images.

FR8-03	The seller should have the option to add additional information such as Property specifications, condition, and location.
FR8-04	The system should allow seller to choose between fixed-price Property and bidding Property.
FR8-05	The system should allow users to choose between fixed-price Property and bidding Property.
FR8-06	The system should provide categories for seller to select and assign to their property.
FR8-07	The system should include a field where seller can enter the name of the Property.
FR8-08	The system should include a field where seller can enter a description of the Property.
FR8-09	The system should allow seller to upload images of their property in a designated image upload field.
FR8-10	For fixed-price Property, the system should allow seller to set the price for their property.
FR8-11	For bidding Property, the system should allow seller to set the starting bidding price for their property.
FR8-12	For bidding Property, the system should allow seller to set a time limit for the bidding period, with a maximum duration of 7 days.
FR8-13	The seller should have the ability to manage and update their existing Property listings.

FR9: Edit Post

Req. No.	Functional Requirements
----------	-------------------------

FR9-01	The system should provide a feature that allows seller to edit their posts.
FR9-02	The system should allow seller to edit the details of their post.
FR9-03	The system should provide the ability for seller to remove or add pictures of their property.
FR9-04	The system should allow seller to edit the name of their property
FR9-05	The system should allow seller to edit the price of their property.
FR9-06	If the post is a bidding item, the system should allow seller to edit the base price of the item.

FR10: Delete Post

Req. No.	Functional Requirements
FR10-01	The seller should have the option to delete their own Property listings.
FR10-02	The system should prompt the seller for confirmation before permanently deleting the listing.
FR10-03	Once deleted, the Property listing should no longer be visible on the platform.

FR11- User Profile

Req. No.	Functional Requirements
-----------------	--------------------------------

FR11-01	The seller should have a dedicated user profile
FR11-02	The system should allow the user to see his email.
FR11-03	The system should allow the user to see his password.
FR11-04	The system should allow the user to see his name and address
FR11-05	The system should allow the user to upload his picture.

FR12-Featured Property

Req. No.	Functional Requirements
FR12-01	The system should provide an option for the seller to convert their already listed property into a featured Property.
FR12-02	The system should prioritize the display of featured Property on top of the page
FR12-03	The system should prioritize the display of featured Property on top upon search.

FR13: Payment

Req. No.	Functional Requirements
FR13-01	The system shall provide payment option to his/her feature property.

FR13-02	The system shall allow the user to make payments by transferring the required amount to the provided bank account.
FR13-03	The system shall provide an image upload field for the user to upload a screenshot proof of their payment.
FR13-04	The system shall include a "Confirm" button for the user to verify their payment.

- **Buyer/Customer**

FR14: Searching

Req. No.	Functional Requirements
FR14-01	The system shall provide a search functionality for the user to search for any desired Property.
FR14-02	The system shall allow the user to enter keywords or Property names in a search field.
FR14-03	The system shall display search results based on the entered keywords or Property names.
FR14-04	The system shall provide filters for the user to refine their search results.
FR14-05	The system shall allow the user to filter Property based on their needs, such as category, price range, location, etc.
FR14-06	The system shall provide a filter option to sort Property from oldest to newest.
FR14-07	The system shall provide a filter option to select between fixed-price Property and bidding Property.
FR14-08	The system shall update the search results dynamically based on the selected filters.

FR14-09	The system shall display relevant information for each search result, such as Property name, description, price, and location.
---------	--

FR15: Comments

Req. No.	Functional Requirements
FR15-01	The system shall allow the seller/customer to comment on a post.
FR15-02	The system shall provide a comment section where seller/customer can interact with each other.
FR15-03	The system shall allow seller/customer to comment under bidding posts to interact with the seller.
FR15-04	The system shall allow seller/customer to comment under bidding posts to share their experiences.
FR15-05	The system shall allow seller/customer to view his/ her comment if post is available.
FR15-06	The system shall allow seller/customer to edit or delete their own comments.

FR16: Rating

Req. No.	Functional Requirements
FR16-01	The system shall allow the customer/buyer to rate the seller after completing a purchase transaction.
FR16-02	The system shall provide a rating system using stars (out of five) for the customer/buyer to rate the seller's performance.

FR16-03	The system shall display the average rating of the seller based on all received ratings from customer/buyer.
---------	--

FR17: Add in Wishlist

Req. No.	Functional Requirements
FR17-01	The system allows the user to add the property in his/her Wishlist.
FR17-02	The system shall allow the user to remove the property from their Wishlist.
FR17-03	The system shall allow the user to see their Wishlist.
FR17-04	The system shall allow the user to start the buying from their Wishlist

FR18: Biding

Req. No.	Functional Requirements
FR18-01	The system shall allow the seller/buyer to bid.
FR18-02	The system shall allow the seller/buyer to bid over base price.
FR18-03	The system shall display the highest bid to the Seller/buyer/admin.

- **ADMIN**

FR19: Admin Login

Req. No.	Functional Requirements
FR19-01	The system shall allow the user to login using their email addresses.
FR19-02	The system shall allow the user to enter his email address in the required field.
FR19-03	The system shall allow the user to enter his password in the required field.
FR19-04	The system enables the user to enter the login button.

FR20: Action against a post

Req. No.	Functional Requirements
FR20-01	The system shall allow the user to action against the seller's post.
FR20-02	The system shall allow the user to delete the post if it is unsuitable or scam.
FR20-03	The system shall allow the user to enter a cause for deletion in order to inform the seller.

FR21: Action against a seller

Req. No.	Functional Requirements
FR21-01	The system must allow the user to act against the seller.

FR21-02	The system shall allow the user to block him.
FR21-03	The system shall allow the user to enter a cause for block in order to inform the seller.

FR22: Seller Verification

Req. No.	Functional Requirements
FR22-01	The system shall allow the user to verify the seller.
FR22-02	The system shall allow the user to view the seller's Computerized National Identity Card (CNIC) image that has been uploaded in the uploaded field.
FR22-03	The system shall allow the user to verify the seller's Computerized National Identity Card (CNIC) number that was entered in the required field.
FR22-04	The system shall allow the user to contrast the seller's uploaded Computerized National Identity Card (CNIC) number with the sellers CNIC) number that has been uploaded.
FR22-05	The system shall allow the user to click on confirmation of verification.
FR22-06	In case of the entered and uploaded Computerized National Identity Card (CNIC) don't match the system shall allow the user to denied verification.

FR23: Payment Verification

Req. No.	Functional Requirements
FR23-01	The system shall allow the user to confirm the payment.

FR23-02	The system shall allow the user to confirm the verification of the buyer and seller's payment.
---------	--

FR24: Virtual Assistant (VA)

Req. No.	Functional Requirements
FR24-01	The Virtual Assistant module must provide a user-friendly search interface where Customers can enter their search criteria for finding properties.
FR24-02	The search interface must support text-based input, dropdown menus, and sliders, for Customer to specify their preferences.
FR24-03	Customers should have ability to specify various criteria, such as location, price range, property type (e.g., residential, commercial), number of rooms, and any other relevant attributes.
FR24-04	The module must display search results in a clear and organized manner.
FR24-05	Each search result should include essential details such as property name, location, price, key features.
FR24-06	The module may incorporate intelligent algorithms or machine learning techniques to offer personalized property recommendations based on the Customers/buyer search history, preferences, or browsing behavior.
FR24-07	Recommendations can help Customers discover relevant properties that align with their interests.
FR24-08	The Virtual Assistant should handle Customer input errors and provide clear error messages or suggestions to guide Customers in correcting their search criteria.

FR24-09	The module must reflect real-time updates on the property availability, status changes, and new listings to provide users with the most up-to-date information during their search.
---------	---

2.3.2 Non-Functional Requirements

- **Performance**

NFR01: Response time

Req. No.	Non-functional Requirement
NFR01-01	The BidLand system must provide the fast system response for the users, like placing bids and updating property information.

NFR02: Scalability

Req. No.	Non-functional Requirement
FR02-01	The system must be able to handle large number of simultaneous users and property listing without decrease the performance.

NFR03: Availability

Req. No.	Non-functional Requirement
FR03-01	The system must be available and accessible to the user in every time, except during the maintenance and upgrade.

- **Reliability**

NFR04: Data integrity

Req. No.	Non-functional Requirement
----------	----------------------------

FR04-01	The system must ensure the accuracy and integrity of users and property during the bidding.
---------	---

NFR05: Fault Tolerance

Req. No.	Non-functional Requirement
FR05-01	The system must be able to handle the errors and recover from the failures without losing data and disrupting user activity.

- **Security**

NFR06: Authentication and authorization

Req. No.	Non-functional Requirement
FR06-01	The system must be authenticate and authorize the user to ensure only authorized user can access and modify the system and property information.

NFR07: Secure Transaction

Req. No.	Non-functional Requirement
FR07-01	The system should provide secure payment option and protect financial transaction.

- **Usability**

NFR07: User-Friendly interface

Req. No.	Non-functional Requirements
FR07-01	The system should have easy-to-use interface that allows users to navigate, search the property, and place the bid without any difficulties.

NFR08: Responsiveness

Req. No.	Non-functional Requirements
FR08-01	The system must provide real-time updates on property status and relevant notification to keep the user informed.

NFR09: Compatibility

Req. No.	Non-functional Requirements
FR09-01	The system should be compatible with multiple devices and web browsers.

2.4 Use Case Descriptions and design

2.4.1 Sign-up:

Use Case ID: UC-01		Use Case Name: Sign-up	
Priority: High			
Actor(s): Sellers, Customers			
Brief Description:		This use case id enables users to register themselves on BidLand	
Pre-Condition(s):		• Users must not have an account before • Users should have a good internet connection	
Normal Flow of Events:		Alternative Flows:	
1. First-time customer and sellers register themselves by clicking the signup button.			
2. In response, the system directs the user to the registration page.			
3. The users complete the form's mandatory fields and click the submit button.		3a- The signup button cannot be accessed until the user has completed all required fields.	

4. The system checks that all of the fields are filled in and that the information is accurate.	4a- The system must alert the user if a field is left empty or the format is incorrect.
5. The system checks the database's information. If there are no matches, the system will save data in a database.	5a- the message "User already exists" will Appear if details match any record in database.
6. To access the application, the system must generate and provide the user with a unique ID and password.	6a- The system will prompt you to log in.
7. Use case end	
Post-condition(s):	
The user must be able to log in to the system with his unique username and password.	
Use case cross-references:	
Extends:	None
Includes:	None

2.4.2 Login:

Use Case ID: UC-02		Use Case Name: Login	
Priority: High			
Actor(s): Sellers, Customers			
Brief Description:		By inputting their username and password, the user is given access to the system in this use case.	
Pre-Condition(s):		Users must have a registered account,	
Normal Flow of Events:		Alternative Flows:	

1. Use case start	
2. The user (customer or seller) must click the login button.	
3. In respond system directs the user to the login page	
4. The user clicks the log in button after entering a distinct username and password.	4- The signup button cannot be accessed until all required fields have been filled in by the user.
5. The system verify the data from the database.	5- If a field is left null or the details shall not match with database, the system shall notify the user.
6. System checks the data in the record; if it matches, it logs the user in and directs him to the homepage.	
7. use case end	
Post-condition(s):	
The user must be able to log in to the system by inputting correct username and password.	
Use case cross-references:	
Extends:	Registration
Includes:	None

2.4.3 Bid on property:

Use Case ID: UC-03	Use Case Name: Bid on property
Priority: high	

Actor(s): Customer	
Brief Description:	This use case allows the customer to participates in bidding to bid on property
Pre-Condition(s):	• Customer must log in into the system. • Customer must have good internet connection
Normal Flow of Events:	Alternative Flows:
1. Use case start	
2. The customer click on the property whose bid starts	
3. The customer then clicks on the bid button to participate in bidding	
4. The customer enter the price and clicks on add bid button	
5. The system checks the customer bid position throughout entering to ending time	5- If the bid is not highest the system notifies the customer
6. If the bid is highest at end the system notify that he won the bid	6- If the bid is not highest the system notifies the seller lose bid
8. The system then inactive the bid	
9. use case end	
Post-condition(s):	

The customer buys the property	
Use case cross-references:	
Extends:	None
Includes:	None

2.4.4 Search property:

Use Case ID: UC-04		Use Case Name: Search property	
Priority: Medium			
Actor(s): Customer, seller			
Brief Description:		This use case allows the customer seller to search the property	
Pre-Condition(s):			
Normal Flow of Events:		Alternative Flows:	
1. Use case start			
2. The customer enters a name in the search bar or chooses a category.			
3. The customer clicks on the search button.			
4. All property of search result list down		4a- If the name or category doesn't match, the message "Property Not Found" appears.	
5. The consumer chooses to sort the property's pricing either from highest to lowest or from lowest to highest.			

6. Use case end	
Post-condition(s):	
The user views the related properties.	
Use case cross-references:	
Extends:	None
Includes:	None

2.4.5 Add Property:

Use case ID 05		Use case Name: Add Property	
Priority	High		
Actors:	Seller		
Use Case Summary	Add property allows the seller to add properties in categories formed by admin.		
Pre-condition:	Homepage should be loaded.		
Normal Flow of Events		Alternative Path	
1. Use case starts.			
2. There is an option for user to add property.			
3. Then user click on the add property option and add the property with all its details.			

4. The user will enter name, category, price description, and type (new, old) of the property.	4a: The system will request the user to input a name if they do not do so. 4b: The system prompts the user to input the category if the user does not do so. 4c: The system prompts the user to enter the price if the user does not enter it. 4d: If the user does not submit a description, the system prompts the user to do so. 4e: If the user does not enter the kind (old, new), the system will prompt the user to do so.
5. This use case ends.	

Post Conditions	
Step#1	Description
	The property is added with all the information.
Use Case Cross References	
Includes	None
Extends	None

2.4.6 Manage Customer/Seller:

Use case ID 06		Use case Name: Manage customer/Seller	
Priority		High	
Actors:		Seller, Admin, Customer	
Use Case Summary		Manage the customer/ sellers' profiles and bidding process	
Pre-condition:		Seller and Customer should be verified.	
Normal Flow of Events		Alternative Path	
1. When an administrator has to inspect or delete any seller or customer, the use case begins.			
2. The administrator selects the sellers/customers option.			
3. Admin enters the name or id of seller/customer			

4. The top search results are displayed.	
5. Profile of person opens	
7. Admin perform task (view, delete) profile.	
8. This use case ends.	
Post Conditions	
Step#1	Description

Use Case Cross References	
Includes	None
Extends	None

2.4.7 Chat with user:

Use case ID 07		Use case Name: Chat with user	
Priority	Primary		
Actors:	Seller, Admin, Customer		
Use Case Summary	It allows to chat between admin, seller and customer.		
Pre-condition:	The user must log in the system.		
Normal Flow of Events		Alternative Path	
1. When users wants to chat with one another, the use case begins.			
2. Admin can update about the property by sending a message. Information about the property can be shared between the customer and the seller.			
3. They can send messages, images and audio.			
4. This use case ends.			

Post Conditions	
Step#1	Description
	User will be able to send and receive messages.
Use Case Cross References	
Includes	None
Extends	None

2.4.8 Update bid timing:

Table 1: use case update bid timing

Use case ID 08 Use case Name: Update bid timing	
Priority	Primary
Actors:	Admin
Use Case Summary	This will allow the user to edit the bid time of the bidding property.
Pre-condition:	User must login to the system.
Normal Flow of Events	Alternative Path
1. The use case begins when the administrator wants to change the bid time.	
2. Admin can update the time of the bid property.	

3. Admin can select the time and date of the bid property.	
4. The time and date of the bidding property is updated.	
5. This use case ends.	

Post Conditions	
Step#1	Description
	Customer will be notified about the updated bidding time and date.
Use Case Cross References	
Includes	None
Extends	None

2.4.9 Contact Us:

Use case ID 09	Use case Name: Contact Us
Priority	Low
Actors:	Admin

Use Case Summary	The goal of this is to allow the user to provide feedback and ask questions.	
Pre-condition:	User must login to the system.	
Normal Flow of Events		Alternative Path
1. The use case starts when the user gives any feedback or ask any query or feedback.		
2. The user clicks on Contact us page.		
3. The system responds by showing a Contact form.		
4. The user fills the form and clicks on the send button.		
5. The system responds by showing a message "Thank you for your feedback"		
6. This use case ends.		

Post Conditions	
Step#1	Description
	The user has given feedback or asked questions.
Use Case Cross References	
Includes	None

Extends	None
----------------	------

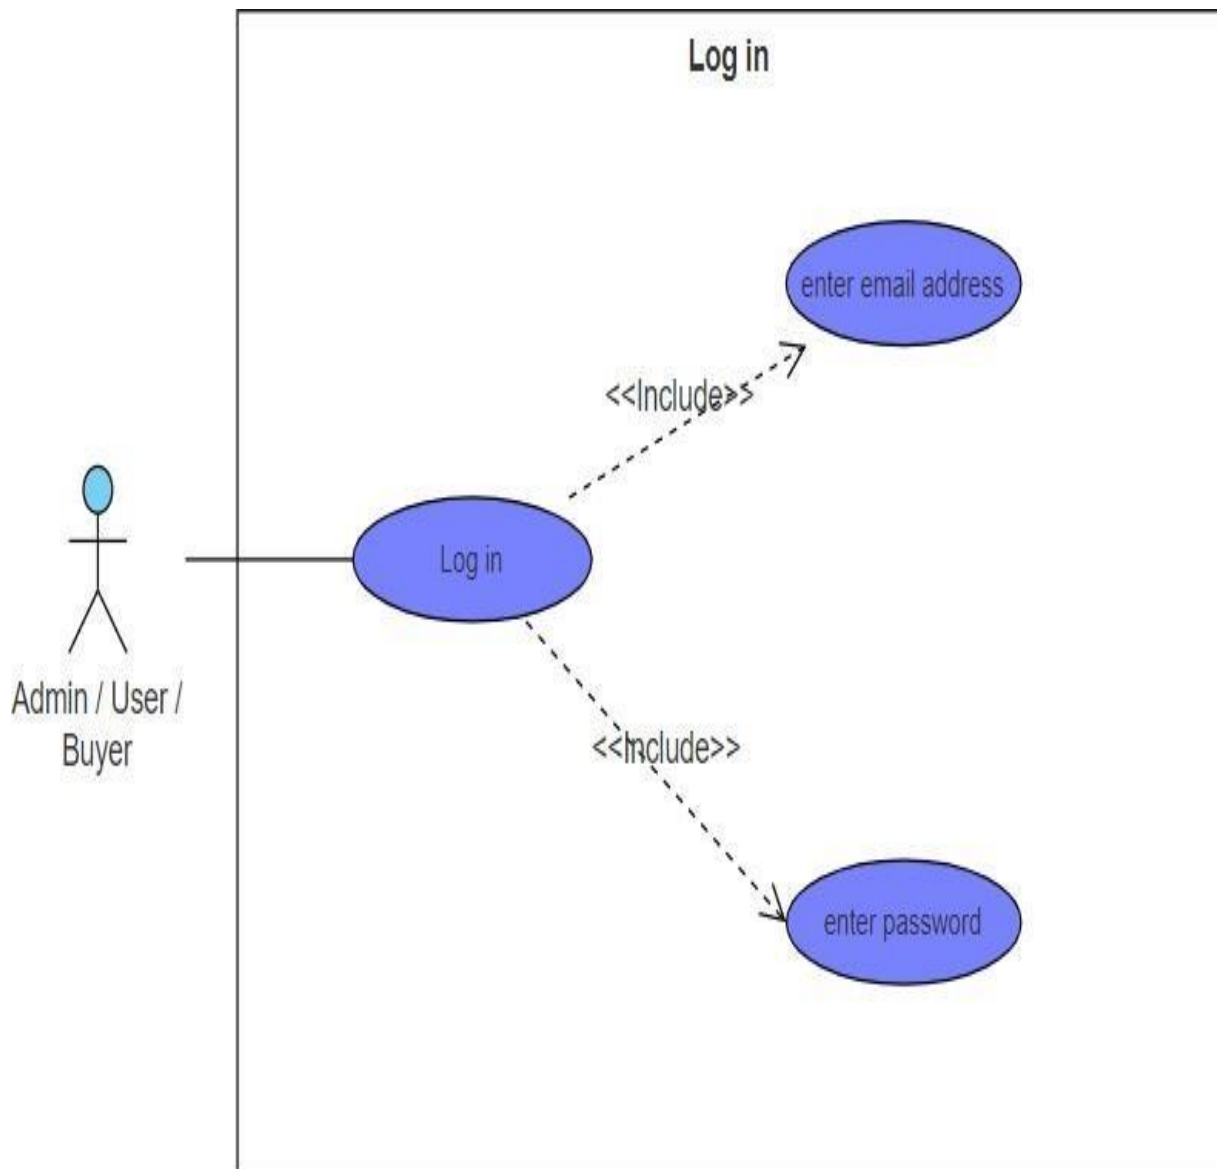

2.4.10 Bids:

Use case ID 010		Use case Name: Purchase Bids	
Priority		High	
Actors:		Customer	
Use Case Summary		The purpose of this is to allow the user to purchase bids.	
Pre-condition:		User must login to the system.	
Normal Flow of Events		Alternative Path	
1. The use case starts when the user wants to bid on the property.			
2. The user clicks on the property he/she wants to bid.			
3. The system responds by showing all the information like description, type, price of the property.			
4. The user can click on the purchase bid option.		4a. The user is not interested in the property so he/she does not purchase the bid.	
6. This use case ends.			

Post Conditions	
Step#1	Description
	The user then will be notified about the bid timing.
Use Case Cross References	
Includes	None
Extends	None

Chapter 4: System testing

4.1 Test cases

4.1.1 Login

Test Case #:	1	Test Case Name:	Login
System:	BidLand	Subsystem:	

Designed By:		Ahmed Waheed		Design Date:		05/06/2023
Executed By:		Khawaja Asad		Execution Date:		10/11/2023
Short Description:		This test case test the login. User can add email address and password to Login to the system.				
Pre-Conditions: 1. User already register on the system.						
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	User selects portal from the main page.		The system redirects to user login.	As per expected response	Pass	
2	User enter the valid email address and password	Valid email address and password	Redirect to the Seller/Buyer Dashboard	As per expected response	Pass	
3	All input fields will validate.		System shows the login page field	As per expected response	Pass	
4	If an incorrect password is entered, the system will notify.		If incorrect password added the system will notify	As per expected response		

4.1.2 Register

Post-Conditions:

1. The buyer / seller have be logged in and redirected toward the home page

Test Case #:	2	Test Case Name:	Register
System:	BidLand	Subsystem:	
Designed By:	Ahmed Waheed	Design Date:	05/06/2023
Executed By:	Khawaja Asad	Execution Date:	10/11/2023
Short Description:	This test case test the Registration. User can create account by providing the required information.		

Pre-Conditions:

1. The user must enter all required details.

Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	User click on the register (create account) button.		System redirect to the register page.	As per expected response	Pass	
2	User enters all the details.	Email, password & contact number	User enter the correct details.	As per expected response	Pass	
3	System takes the User to the login page.		System send details to the database.	As per expected response	Pass	

Post-Conditions:

1. The user has redirected to the Login page

4.1.3 Logout

Test Case #:		3	Test Case Name:		Logout	
System:		BidLand	Subsystem:			
Designed By:		Ahmed Waheed	Design Date:		05/06/2023	
Executed By:		Khawaja Asad	Execution Date:		10/11/2023	
Short Description:		This test case test the logout functionality. All the user can logout from the system and the state of the system remains same.				
Pre-Conditions: 1. User already logged in in his/her						
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	User successfully logout from the system		System shows the message you have already logged out.	As per expected response	Pass	

Post-Conditions: 1. The system save the state of each user.						
---	--	--	--	--	--	--

4.1.4 Forget password

Test Case #:		4		Test Case Name:		Forgot Password	
System:		BidLand		Subsystem:			
Designed By:		Ahmed Waheed		Design Date:		05/06/2023	
Executed By:		Khawaja Asad		Execution Date:		10/11/2023	
Short Description:		This test case test the Forgot Password functionality. User can reset his password through email address.					
Pre-Conditions: 1. User already logged in in his/her							
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments	
1	User can click on forget password		System shows the login page	As per expected response	Pass		
2	User can enter his email address to recover password	Email address	The system generate the link on the provided email address.	As per expected response	Pass		
3	User can set his new password		System show the message.	As per expected response	Pass		

Post-Conditions: 1. User will be able to save the change 2. User is directed to the login page

4.1.5 About us

Test Case #:	5	Test Case Name:	About us			
System:	BidLand	Subsystem:				
Designed By:	Ahmed Waheed	Design Date:	05/06/2023			
Executed By:	Khawaja Asad	Execution Date:	10/11/2023			
Short Description:	This test case test the About us functionality. User can get information about the BidLand.					
Pre-Conditions: 1. User is using the website and have access to the navigation bar.						
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	User can click on About us		System shows the About us page	As per expected response	Pass	
2	User can view the company detail		System shows the company / website detail	As per expected response	Pass	

Post-Conditions:

User has access to detailed information about the company and website

4.1.6 Profile Update

Test Case #:		6		Test Case Name:		Profile Update	
System:		BidLand		Subsystem:			
Designed By:		Ahmed Waheed		Design Date:		05/06/2023	
Executed By:		Khawaja Asad		Execution Date:		10/11/2023	
Short Description:		This test case test the Profile Update functionality. User can update his/her profile					
Pre-Conditions: 1. User musts be logged in and on their profile page							
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments	
1	User click on the edit profile button.		The system redirects the user to the edit profile page	As per expected response	Pass		
2	User enters his updated information.	Password, property	The user enters valid information	As per expected response	Pass		
3	User clicks on the save change button.		User new information is saved in the system	As per expected response	Pass		

Post-Conditions: 1. Seller profile successfully updated and associated with their account in the system

4.1.7 Featured property

Test Case #:		7	Test Case Name:		Featured property	
System:		BidLand	Subsystem:			
Designed By:		Ahmed Waheed	Design Date:		05/06/2023	
Executed By:		Khawaja Asad	Execution Date:		10/11/2023	
Short Description:		This test case test the Featured Property functionality. User can update his/her profile				
Pre-Conditions: 1. User musts be logged in and on their profile page						
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	User click on the featured property button.		The system redirects the user to the edit profile page	As per expected response	Pass	
3	User clicks on the save change button.		User new information is saved in the system	As per expected response	Pass	

Post-Conditions: 1. Seller profile successfully updated and associated with their account in the system

4.1.8 Become a seller

Test Case #:		7		Test Case Name:		Become a seller	
System:		BidLand		Subsystem:			
Designed By:		Ahmed Waheed		Design Date:		05/06/2023	
Executed By:		Khawaja Asad		Execution Date:		10/11/2023	
Short Description:		This test case test the become a seller functionality. User can become seller and post by complete the verification process					
Pre-Conditions: 1. User musts be logged in.							
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments	
1	User click on the verification button.		The system redirects the user to the verification page.	As per expected response	Pass		
2	User uploads his front and back picture of his CNIC.	CNIC pictures	The user enters clear picture of CNIC.	As per expected response	Pass		
3	The admin verifies the user		User details are verified	As per expected response	Pass		
4	System display the user account is verified.		User notify that the user is verify.	As per expected response	Pass		

Post-Conditions: 1. The user will be verified.
--

4.1.9 Property listing

Test Case #:	8	Test Case Name:	Property listing
System:	BidLand	Subsystem:	
Designed By:	Ahmed Waheed	Design Date:	05/06/2023
Executed By:	Khawaja Asad	Execution Date:	10/11/2023
Short Description:	This test case test the Property listing functionality. User can list his/her profile		

Pre-Conditions: 1. User (seller) must be logged in and have a verified account.						
---	--	--	--	--	--	--

Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	User click on add new property.		The system redirects the user to the add property page.	As per expected response	Pass	
2	User select the starting price of the bidding	Price	The user property price is selected.	As per expected response	Pass	
3	User describe the property detail and add picture of the property	Images, description, type	User enter the correct detail and picture	As per expected response	Pass	
4	User click on the add button.		Property details are stored in DB	As per expected response	Pass	
5	The property id listed.		System show the property listed message	As per expected response	Pass	

Post-Conditions: 1. The seller's property is listed

4.1.10 Edit post

Test Case #:		9		Test Case Name:		Edit post	
System:		BidLand		Subsystem:			
Designed By:		Ahmed Waheed		Design Date:		05/06/2023	
Executed By:		Khawaja Asad		Execution Date:		15/11/2023	
Short Description:		This test case test the edit post functionality. User can edit his/her post					
Pre-Conditions: 1. The seller’s post must exits							
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments	
1	System allow the user to click on the post		The system redirects the user to the specific post detail.	As per expected response	Pass		
2	System allow the user to click on the edit post button		The user had made the correct changes	As per expected response	Pass		
3	System allow the user to edit property details	Images, description, type	System update the property detail in DB	As per expected response	Pass		
4	System display the message that property is updated		Display a message post is updated	As per expected response	Pass		

Post-Conditions:

1. The seller's post is updated

4.1.11 Delete post

Test Case #:		10	Test Case Name:		Property listing	
System:		BidLand	Subsystem:			
Designed By:		Ahmed Waheed	Design Date:		05/06/2023	
Executed By:		Khawaja Asad	Execution Date:		15/11/2023	
Short Description:		This test case test the delete post functionality. User can delete his/her post				
Pre-Conditions: 1. The seller’s post must exits						
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	System allow the user to click on the post		The system redirects the user to the specific post detail.	As per expected response	Pass	
2	System allow the user to click on the delete post button		The user has clicked on the delete post button.	As per expected response	Pass	
3	System display the message about the post has been deleted		System delete the post from DB	As per expected response	Pass	

Post-Conditions: 1. The seller's post has been deleted
--

4.1.12 User Profile

Test Case #:	11	Test Case Name:	User Profile
---------------------	----	------------------------	--------------

System:		BidLand		Subsystem:		
Designed By:		Ahmed Waheed		Design Date:		05/06/2023
Executed By:		Khawaja Asad		Execution Date:		15/11/2023
Short Description:		This test case test the User Profile functionality. User can view his detail.				
Pre-Conditions: 1. The user must be logged in.						
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	User click on profile icon		The system redirects the user to the user profile	As per expected response	Pass	
2	User profile will be shown		The system displays the seller detail	As per expected response	Pass	

Post-Conditions: 1. The user profile is viewing by user

4.1.13 Featured property

Test Case #:	12	Test Case Name:	Featured property
System:	BidLand	Subsystem:	
Designed By:	Ahmed Waheed	Design Date:	05/06/2023
Executed By:	Khawaja Asad	Execution Date:	26/11/2023

Short Description:		This test case test the featured property functionality. User can make its property to feature so that can display on top of his profile.				
Pre-Conditions: 1. The user must be logged in and property page						
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	Convert already listed property into the featured property		Confirmation message for successful conversion	As per expected response	Pass	
2	Display featured property on top of the page		Display feature property on top of the page	As per expected response	Pass	

Post-Conditions: 1. The property became featured and view on the top of page						
--	--	--	--	--	--	--

4.1.14 Payment

Test Case #:		13		Test Case Name:		Payment	
System:		BidLand		Subsystem:			
Designed By:		Ahmed Waheed		Design Date:		05/06/2023	
Executed By:		Khawaja Asad		Execution Date:		26/11/2023	
Short Description:		This test case test the payment functionality. Buyer will be able to pay through Bank.					
Pre-Conditions: 1. The buyer must be logged in.							
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments	

1	User click on payment option.		The system redirects the user to the different payment option	As per expected response	Pass	
2	User can make payment by bank.	11 digit account number	The system displays the successful payment message	As per expected response	Pass	

Post-Conditions:

1. Payment for the property is done by buyer

4.1.15 Searching

Test Case #:	14	Test Case Name:	Searching
System:	BidLand	Subsystem:	
Designed By:	Ahmed Waheed	Design Date:	05/06/2023
Executed By:	Khawaja Asad	Execution Date:	26/11/2023
Short Description:	This test case test the Searching functionality. Buyer will be able to search property using filters and search bar.		

Pre-Conditions:

1. The user has entered the keyword or property name or price in the search field.

Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	User can access the property search		The system display the property search functionality	As per expected response	Pass	
2	User can enter the keyword or property price	Name, city ,price	The system displays the result based on search keyword or price.	As per expected response	Pass	

Post-Conditions:

1. Searched results are displayed on the screen

4.1.16 Comment

Test Case #:		15		Test Case Name:		Comment	
System:		BidLand		Subsystem:			
Designed By:		Ahmed Waheed		Design Date:		05/06/2023	
Executed By:		Khawaja Asad		Execution Date:		26/11/2023	
Short Description:		This test case test the comment functionality. User will be able to comment on a post.					
Pre-Conditions: 1. The user must be logged in							
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments	
1	User can access the comment section below the post		System display the comment section for the post	As per expected response	Pass		
2	User can comment on a post	text	The system display the confirmation message for successful comment	As per expected response	Pass		
3	User can view his own comment on the post		The system display the user his own comment on the post	As per expected response	Pass		
4	User can edit and delete his comment	text	The system updated the comment	As per expected response	Pass		

Post-Conditions:

1. User comment is posted/ deleted from the post.

4.1.17 Rating

Test Case #:		16		Test Case Name:		Rating	
System:		BidLand		Subsystem:			
Designed By:		Ahmed Waheed		Design Date:		05/06/2023	
Executed By:		Khawaja Asad		Execution Date:		2/12/2023	
Short Description:		This test case test the rating functionality. User will be able to rate on a post.					
Pre-Conditions: 1. The user must be logged in							
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments	
1	User can access the rating section below the post		System display the rating section for the post	As per expected response	Pass		
2	User can rate on a post	Star(rating)	The system display the confirmation message for successful rating	As per expected response	Pass		
3	User can view his own comment on the post		The system display the user his own rating on the post	As per expected response	Pass		

Post-Conditions:

1. User successfully rate a post.

4.1.18 Add in Wish list

Test Case #:		17		Test Case Name:		Add in Wishlist	
System:		BidLand		Subsystem:			
Designed By:		Ahmed Waheed		Design Date:		05/06/2023	
Executed By:		Khawaja Asad		Execution Date:		8/12/2023	
Short Description:		This test case test the Add in wishlist functionality. User will be able to add property in wishlist.					
Pre-Conditions: 1. The user must be logged in							
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments	
1	User can add property to the Wishlist		Confirmation message by system for successful addition	As per expected response	Pass		
2	User can remove property from the Wishlist		Confirmation message by system for successful removal.	As per expected response	Pass		
3	User can view his own Wishlist property		The system display the user his own Wishlist property.	As per expected response	Pass		

Post-Conditions: 1. User can successfully add / remove and view property from Wishlist.

4.1.19 Bidding

Test Case #:	18	Test Case Name:	Bidding
---------------------	----	------------------------	---------

System:		BidLand		Subsystem:		
Designed By:		Ahmed Waheed		Design Date:		05/06/2023
Executed By:		Khawaja Asad		Execution Date:		10/12/2023
Short Description:		This test case test the bidding functionality. User will be able to bid on a post.				
Pre-Conditions: 1. The user must be logged in						
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	User can bid on the property	Price(digit)	Confirmation message by system for successful addition	As per expected response	Pass	
2	User’s bid must be greater than base price	Price(digit)	Confirmation message by system for successful removal.	As per expected response	Pass	

Post-Conditions: 1. User can successfully bid on the post

4.1.20 Admin Login

Test Case #:	19	Test Case Name:	Admin Login
System:	BidLand	Subsystem:	
Designed By:	Ahmed Waheed	Design Date:	05/06/2023
Executed By:	Khawaja Asad	Execution Date:	10/12/2023
Short Description:	This test case test the admin login. Admin can add email address and password to Login to the system.		

Pre-Conditions:

1. Admin account is already register on system.

Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	Admin selects portal from the main page.		The system redirects to admin login.	As per expected response	Pass	
2	Admin enter the valid email address and password	Valid email address and password	Redirect to the Admin Dashboard	As per expected response	Pass	
3	All input fields will validate.		System shows the login page field	As per expected response	Pass	
4	If an incorrect password is entered, the system will notify.	Invalid password	If incorrect password added the system will notify	As per expected response	Pass	

Post-Conditions:

1. Admin is successfully login to the system

4.1.21 Action against a post

Test Case #:	21	Test Case Name:	Action against a post
System:	BidLand	Subsystem:	
Designed By:	Ahmed Waheed	Design Date:	05/06/2023
Executed By:	Khawaja Asad	Execution Date:	12/12/2023
Short Description:	This test case test the action against a post by admin. Admin can take action against a post warn them or directly deleted.		

Pre-Conditions:

- Admin is login in the system and viewing option to take action against a post

Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	Admin can take action against a post		The system display option for taking action against a post	As per expected response	Pass	
2	Admin can delete the post if its scam or unsuitable		System display the confirmation message for successful delete	As per expected response	Pass	

Post-Conditions:

- Action by admin is successfully taken against post

4.1.22 Action against a seller

Test Case #:		21	Test Case Name:		Action against a seller	
System:		BidLand	Subsystem:			
Designed By:		Ahmed Waheed	Design Date:		05/06/2023	
Executed By:		Khawaja Asad	Execution Date:		14/12/2023	
Short Description:		This test case test the action against a seller by admin. Admin can take action against a seller, warn them or directly blocked				
Pre-Conditions: 1. Admin is login in the system and viewing option to take action against a seller						
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	Admin can take action against a seller		The system display option for taking action against a seller	As per expected response	Pass	

2	Admin can block the seller if he scam or post unsuitable content		System display the confirmation message for successful block	As per expected response	Pass	
---	--	--	--	--------------------------	------	--

Post-Conditions:

1. Action by admin is successfully taken against seller

4.1.23 Verify the seller

Test Case #:	22	Test Case Name:	Verify the seller
System:	BidLand	Subsystem:	
Designed By:	Ahmed Waheed	Design Date:	05/06/2023
Executed By:	Khawaja Asad	Execution Date:	16/12/2023
Short Description:	This test case test the Verify the seller functionality. User will be verify by the admin by CNIC picture.		

Pre-Conditions:

1. The Admin must be login and at admin dashboard

Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments
1	Admin can verify the seller.		System display the option for verifying the seller	As per expected response	Pass	
2	Admin can see the CNIC pictures of the seller	CNIC pic	The system display the uploaded CNIC images of seller	As per expected response	Pass	
3	Admin can click on the verification button		Confirmation message for successful verification of seller	As per expected response	Pass	

4	Admin can deny the verification		Confirmation message for successful deny of verification of seller	As per expected response	Pass	
---	---------------------------------	--	--	--------------------------	------	--

Post-Conditions:

1. The verification and deny of verification of seller is successfully done by Admin

4.1.24 Virtual Assistant

Test Case #:		24		Test Case Name:		Virtual Assistant	
System:		BidLand		Subsystem:			
Designed By:		Ahmed Waheed		Design Date:		05/06/2023	
Executed By:		Khawaja Asad		Execution Date:		20/12/2023	
Short Description:		This test case test the Virtual assistant functionality. VR assistant can guide the user in proper way					
Pre-Conditions: 1. The user is login and searching for property							
Step:	Action	Input Data	Expected System Response	Actual Response	Pass/ Fail	Comments	
1	Use the help icon		Display the help icon	As per expected response	Pass		
3	Display the list.		Display list result in clear and organized manner	As per expected response	Pass		

4	Redirects to the selected option		Display the selected option	As per expected response	Pass	
---	----------------------------------	--	-----------------------------	--------------------------	------	--

Post-Conditions:

1. User is viewing the search interface
2. Personalized recommendations are displayed to the user
3. User is guided to correct search criteria

4.2 Unit / Integration / Acceptance Testing

Unit/Integration/Acceptance Testing is an essential testing methodology for the property bidding application "Bid Land". These testing techniques serve different purposes and collectively ensure the quality and reliability of the application.

Unit Testing:

In the context of "Bid Land," unit testing involves testing individual components or units of code to verify their functionality. Each module or function within the application is tested in isolation to ensure that it performs as intended. For example, the unit testing process would involve checking if the code responsible for user registration or property listing works correctly. Unit testing helps identify any bugs or errors at an early stage, allowing for timely debugging and ensuring that each component functions as expected.

Integration Testing:

As the name suggests, integration testing involves testing the integration and interaction between different modules or components of the "Bid Land" application. This testing phase ensures that the individual components work harmoniously together and share information accurately. For instance, integration testing for "Bid Land" would involve verifying that the property listing module seamlessly communicates with the bidding module, enabling users to place bids on properties without any issues. Integration testing helps identify any integration-related defects, such as data inconsistencies or communication failures between different parts of the application.

Acceptance Testing:

Acceptance testing is performed to validate whether the "Bid Land" application meets the specified requirements and is ready for deployment. It focuses on evaluating the application's compliance with business and user requirements. This testing phase involves executing test cases that simulate real-life scenarios and user interactions. For "Bid Land," acceptance testing would involve verifying features like user authentication, property search functionality, bidding processes, and notifications. The purpose of acceptance testing is to ensure that the application meets the users' expectations and functions smoothly, giving confidence to stakeholders that the application is ready for release.

In summary, unit testing assesses the functionality of individual components, integration testing validates the interaction between different modules, and acceptance testing ensures that the "Bid Land" application meets the intended requirements. By employing these testing techniques, the development team can identify and rectify any issues early in the development process, leading to a more robust and reliable property bidding application.

Chapter # 5 Website and Application Front-End

Website interface

This section contains screenshots of the various screens of BidLand Web application Interface.

Home Screen

The screenshot shows a web browser at localhost:5173/register. The page features a navigation bar with links: Home, Properties, Sellers, Bidding, Contact, and About Us. On the right of the navigation bar is a heart icon and an 'Account' button. The main content area is split into two sections. The left section has a large orange and purple gradient background with the BidLand logo, the text 'The most popular property selling platform', and a 'Read More' button. The right section is white and contains a 'Welcome To BidLand' heading with a 'Create Your Account' link. Below this are five input fields: 'Username', 'Email Address', 'Password', 'Phone Number', and a 'Choose a role' dropdown menu. There is also a dashed box for file upload with the text 'Click to upload or drag and drop'. At the bottom of the right section, there is a link 'Already have account? Login' and a large blue 'Register' button. A chat bubble icon is visible in the bottom right corner.

Chapter # 6: Conclusion

6.1 Problems Faced and lesson learned

Throughout the process of gathering and consolidating the project requirements, we encountered a few challenges. Initially, we faced uncertainty regarding the exact specifications, leading to a certain degree of variation in the requirements. We diligently collected and organized the requirements based on the information available to us at the time. However, as the project progressed, we experienced frequent changes in the requirements, rendering them less effective. The dynamic nature of the evolving requirements posed a challenge in maintaining consistency and stability in our project planning. It required adaptability and flexibility to accommodate the continuous changes and ensure alignment with the evolving needs of the project.

Throughout the course of this project, we gained invaluable insights and experiences. Firstly, we honed our ability to accomplish our objectives while adhering to time constraints, effectively managing our tasks within the given timeframe. By researching similar applications and staying up to date with the latest trends, we expanded our knowledge of the most current tools and techniques employed in the field. The study of various research works by different authors helped us grasp the fundamentals of requirement gathering, clarifying our concepts and visions. Furthermore, we recognized the significance of team management, as working with a diverse group of individuals allowed us to appreciate the varying perspectives and ideas each team member brings to the table. Collaboratively, we learned how to achieve precise and efficient outcomes. Lastly, as we delved into the realm of innovative ideas during the requirement gathering phase, we broadened our scope of knowledge, enhancing our overall proficiency in the project.

6.2 Project Summary

The final year project revolves around the development of Bid Land, an innovative online platform designed specifically for users in Pakistan to seamlessly sell or purchase their desired properties, be it new or old, from the comfort of their own homes. Choosing a project like Bid Land comes with its fair share of challenges, as online purchasing is not widely embraced in Pakistan due to trust issues and the relatively slower adoption of technology. Therefore, it requires time and effort to acclimatize people to new technological shifts. To tackle these challenges head-on, the Bid Land concept will be meticulously crafted with the client in mind, ensuring that user-friendliness remains at the forefront of the platform's design and functionality. Recognizing the diverse needs of the users, Bid Land aims to cater to a wide range of property types, including residential homes, commercial spaces, retail stores, and any other properties that may be up for auction.

The primary objective of the Bid Land project is to create a user-centric platform that prioritizes customer satisfaction. By addressing the unique challenges of the Pakistani market, such as trust issues and limited technology adoption, Bid Land aims to bridge the gap between online property

trading and the preferences of the local population. Through a user-friendly interface, secure transactions, and a diverse range of property offerings, Bid Land strives to establish itself as a trusted and convenient destination for property buyers and sellers in Pakistan.

In conclusion, the Bid Land project seeks to overcome the hurdles associated with online property trading in Pakistan by designing a platform that caters to the needs of the users. With an emphasis on user-friendly, a comprehensive range of property types, and a secure payment mechanism, Bid Land aims to provide a satisfactory and trustworthy experience for all parties involved. By embracing technology and adapting to the preferences of the local market, Bid Land aspires to revolutionize the way properties are bought and sold in Pakistan.

6.3 Future Work:

In future our application will be launched in Urdu.
